Item #12 Remarks

Water that would be obtained from surface runoff and Woodruff Springs would be used during the construction of a haul road. Upon completion of this road and associated structures, waters from these surface sources will no longer be required by the applicant. Therefore, the application is for a temporary use of this water.

The estimated consumptive use if 100,000 gallons per day x 180 days = 18 million gallons/annum or 55.24 acre feet/annum from any and/or all surface sources.

The place of use listed describes the sections which the haul road will pass through. The actual place of use will be that portion of these sections occupied by the construction of the road and associated structures.
